

GLOWING Volcano Eruptions Materials

Materials:

- Vinegar
- Baking soda
- Glow in the dark paint or Fluorescent paint
- Dish soap (optional)

Method

1. We started by making a glow in the dark volcano. In a tall glass we added roughly 1/2 cup of baking soda along with 1 teaspoon of orange glow in the dark paint.
2. Then we poured in the vinegar (roughly 1/2 cup)

Simple & amazing Science! We made our volcano erupt over and over. We did find that stirring the paint into the vinegar helped the entire volcano to glow intensely. I recommend mixing the paint in to make the vinegar glow before adding it to your volcano.

After a bit of play with our volcano we moved on to make GLOWING rainbow eruptions. These were so cool! All you have to do to make the rainbow eruptions is add varying colored glow paints to your baking soda before pouring in the vinegar. You can add one color paint at a time or a bit of each color of the rainbow to **make ERUPTING RAINBOWS!** We made many eruptions, some with one color and some with all the colors at once. Every single eruption was stunning- even when we turned the lights on!
