

Infection control
book

An infection is a virus
which can pass from person
to person.

A virus can make us ill.

We can stop viruses from spreading....

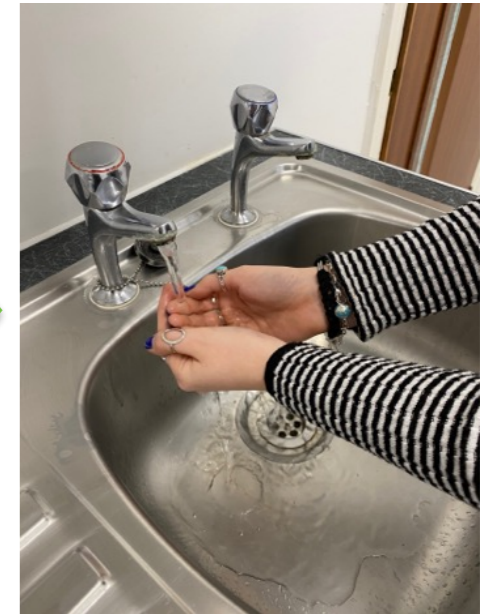

By blowing our nose into a tissue and putting the tissue into a bin.

By washing and drying our hands.

By using hand sanitiser.

When we have been out in
the community and touched
surfaces
we need to wash and
sanitise our hands.

When we have been playing or working with animals we need to wash and sanitise hands.

We must not touch our eyes.
