

Bio-Diversity for World Environment Day 2020

Bio-diversity is the theme for World Environment Day 2020. Every animal and plant plays a part in making the world we live in a habitable place. Trees absorb the carbon dioxide and release oxygen so that we can breathe. All animals play important parts in the food chain.

How can we ensure this precious planet is balanced?

- **Protecting the global environment from our waste**

We can do this by recycling materials, buying less plastic products and supporting charities that do clean-ups and protect animals such as 4Ocean, WWF, and the Rainforest Alliance.

- **Helping to promote the health of your local environment**

Picking up litter, planting trees in your garden, talking to your local council about protecting green spaces.

- **Spread the word!**

Tell your families, neighbours and housemates about this so that they can know about it too.
